O365 Manager Plus

VS

Native Office 365

ZOHO Corp. Confidential

ManageEngine O365 Manager Plus Vs. Native Office 365

Adoption of Office 365 has picked up in big and small businesses, and it is mandatory to monitor them continuously to keep your Office 365 setup secure. Office 365 comes with its own set of pre-configured reports, which only manage to graze the surface of the happenings in your Office 365 environment. The management features provided also lack the knack of managing Office 365 in a simplified way. Another obvious shortcoming of the native Office 365 is the lack of a scheduler to automate generation of reports, and mailing them to administrators at fixed intervals. Native Office 365 also do not provide any auditing reports to audit the happenings in your organization. The audit logs have to be perused without any filter features to retrieve the data you want.

Office 365 Reporting

ManageEngine presents you, O365 Manager Plus which drills down Office 365 to provide you the granular level data. The exhaustive pre-configured reports, provides you knowledge and visibility, which can't be provided by native Office 365 reports. You can schedule the reports to be generated on a monthly, weekly, daily, or even on an hourly basis and have it mailed to you in CSV, PDF, HTML or XLS format.

The following document will highlight how vastly improved the reporting features of ManageEngine O365 Manager Plus are, when compared to Office 365's native reporting.

Office 365 Reports			
Feature		ManageEngine O365 Manager Plus	Native Office 365 Reporting

Office 365 Management

In your effort to manage your Office 365 setup, native Office 365 features might not meet your needs. O365 Manager Plus comes with sophisticated features to make Office 365 management effortless. It provides feature-based management so you can govern Office 365 components separately.

The following table shows you advanced the management features of O365 Manager Plus are, when compared to Office 365 features:

Office 365 Management			
Feature		O365 Manager Plus	Native Office 365
Azure Active Directory	Block/Unblock users from Office 365 services		
	Delete users from Azure		
	Restore users in Azure		 (Only one user can be restored at a time)
	Address attribute changes	 (While changing attributes in bulk, different values can be given)	 (While changing attributes in bulk, same value should be given)
	Change manager		 (Only one user can be restored at a time)

	Change domain	✓	✓
	Enable/disable Multi Factor Authentication	✓	✓
	Choose authentication method	✓	✓
	Choose default authentication method for Multi factor Authentication	✓	✓
	Add/remove/modify licenses of users	✓	✓
	Remove all the licenses of a user	✓	✓
	Group accept mail from (Configure whether the group can accept only internal mails or both internal & external)	✓	✓ (Only one user can be restored at a time)
Exchange Online	Address book policy changes	✓	✓
	Mailbox features settings (Enable \ Disable OWA,EWS,POP,IMAP features of mailbox)	✓	✓
	Enable/disable mailtip settings	✓	✓ (Only one user can be restored at a time)
	Mailbox auto reply configuration (Enable/disable/schedule auto reply with separate messages for internal users)	✓	✗

	Mailbox forward to		
	Message size restriction (Configure maximum size for messages that can be sent and received)		 (Only one user can be restored at a time)
	Enable/disable litigation hold		 (Only one user can be restored at a time)
	Change litigation hold duration		 (Only one user can be restored at a time)
	Change litigation hold owner		 (Only one user can be restored at a time)
	Enable/disable mailbox audit settings		
	Configure what actions should be audited for admin, user, and non-owner access.		
	Mailbox permission settings

	Unhide mailbox from address list		
	Convert mailbox to another type		
	Enable mailbox clutter		

	Disable mailbox clutter	✓	✗
	Enable/disable archive mailbox for user mailbox	✓	✓
	Enable Exchange mailbox	✓	✗
	Disable Exchange mailbox	✓	✗
	Exchange contact attribute changes	✓ (While changing attributes in bulk, different values can be given)	✓ (While changing attributes in bulk, same value should be given)
	Delete contacts	✓	✓
	Enable/disable mail for public folder	✓	✓
	Delete public folder	✓	✓

Office 365 Auditing

It is a good thing to have your Office 365 setup audited. You need to know who meddled with which file, who purged the emails out of a mailbox, and other activities. Office 365 console does not provide any audit reports. You have only the following two audit logs,

- Security and compliance audit log
- Admin audit log

The woes of these logs are that, it is difficult to filter data based on the actions. It allows you to filter data based on the type of user (admin, user, non-owner, external owner). This is where O365 Manager Plus comes to the rescue.

With O365 Manager Plus, you can generate reports for each and every action separately while you have to peruse the audit logs for required action in native Office 365 reports. You can create your own report views, profiles, and make use of advanced filtering features to retrieve the required data.

To know more about the advantages of O365 Manager Plus over native Office 365 in auditing, [click here](#).

The following table compares the auditing features of O365 Manager Plus and Office 365 console. Learn for yourself how, O365 Manager Plus is far better than Office 365 auditing features.

The following table compares the auditing features of O365 Manager Plus and Office 365 console. Learn for yourself how, O365 Manager Plus is far better than Office 365 auditing features.

Office 365 Auditing		
Feature	O365 Manager Plus	Native Office 365
Reports for each action	✔	✘ Native console does not provide reports. You have to search for the required data form the logs
Long term historical data	✔ Audit data can be stored for indefinite period of time	✘ There are limits to how long the audit data will be maintained based on data being audited.
Profile based auditing	✔	✘
Group based auditing	✔	✘

Advanced filtering	✔	✘ You can search for users in audit log in some records.
Custom views	✔ You can create your custom views for the audit reports	✘
Business hours auditing	✔	✘ You cannot set any time-frame for retrieving audit details
Export data	✔ Can be exported to PDF, CSV, HTML, or XLS	✔ Can be exported to CSV format alone.

This table shows you what are all the actions audited by O365 manager Plus and Office 365

Office 365 Auditing				
Service	Category	Action	O365 Manager Plus	Native Office 365
Exchange Online	Mailbox	Created and deleted mailboxes	✔	✔
		Recovered soft deleted mailboxes	✔	✔
		Created, suspended, and resumed mailbox restore requests	✔	✔
		Configured mailbox settings	✔	✔

Additional Features			
Manage Multiple Office 365 accounts		✓	✗
Technicians	Ability to delegate users with administrative privileges	✓	✓
Customizable Dashboard	Ability to choose the reports that you want to be displayed in the dashboard	✓	✗

Embed Dashboard/ widgets to other webpages	Embed dashboard/ widgets to webpages		
Schedule and send selected reports via email	Scheduler to create and send selected reports via email		
Export reports for offline use	Export reports to CSV, PDF, XLS, HTML		 (Only CSV)

- Comparison is done based on the information available in the competitor's website. The details may vary with the real product

Licensing and Pricing:

O365 Manager Plus is licensed based on the number of users/mailboxes. Pricing starts at mere USD 295 for 100 users/mailboxes. You can check the pricing details [here](#).

Conclusion:

The above comparison proves without a shred of doubt that the native Office 365 lacks in-depth reporting, and simplified management and auditing features. ManageEngine O365 Manager Plus provides all features that the native tools provide, and more.

Note: This document is for comparative purposes only. All the information mentioned here is based on the documents/data available on the competitor's website. The information provided might vary in the actual product.

ManageEngine O365 Manager Plus *Starts @ \$295*

O365 Manager Plus is an extensive Office 365 reporting, management, and auditing solution that helps administrators manage their Office 365 setup effortlessly. The web-based, user-friendly interface allows you to manage Exchange Online, Azure Active Directory, Skype for Business, and OneDrive for Business all from one place.
