Top 10 Reasons to Buy   *SQLDBManager Plus*

Single tool, single console

SQLDBManager Plus provides a single console for monitoring, managing and auditing multiple SQL servers, helping DBAs make effective use of SQL resources.

Ease of deployment

With its easy-to-use point and click installation package, SQLDBManager Plus can be deployed without hassles and can be used without any expert training. It also enables a very affordable alternative to manage SQL servers with pricing based on SQL server instances.

Intuitive Dashboard

SQLDBManager Plus gives you combined business and infrastructure visibility at the same time. What this means is when a failure occurs, you not only know which piece of your server has failed but also which part of your environment is affected.

Spot the exact issue, remediate timely

SQLDBManager Plus offers monitoring support for memory details, session details, job, backup and restore details. It also includes performance statistics such as top queries by CPU, top queries by I/O, monitoring custom queries, sql clusters, mirroring details and more, thereby helping to troubleshoot faster.

Managing capability

SQLDBManager Plus allows you to manage SQL jobs, sessions, user roles and also execute windows-based service actions directly from its console.

Resolve Quickly, Save Time

SQLDBManager Plus detects problems in your SQL server environment and sends alarm as E-mail, SMS, SNMP traps, scripts, etc. DBAs can now spend their time on fixing issues rather than trying to figure out the root cause of a problem.

Proactive Monitoring

You can prevent failures in your SQL servers even before your users notice them. Setting thresholds for various metrics can do this proactive monitoring. When thresholds are crossed, you can opt to get notified through standard mechanisms.

Ensure your data is protected

Ensure every database on all your SQL servers are backed up daily. Make sure backup queries run as planned and get notified in case of any query being not executed.

Reduces Operational Costs

SQLDBManager Plus reduces cost by simplifying management tasks. It moves the day-to-day management and troubleshooting tasks to the operator level thereby freeing your database administrators to work on other strategic projects.

Effective Reporting and Easy Trend Analysis

SQLDBManager Plus reduces cost by simplifying management tasks. It moves the day-to-day management and troubleshooting tasks to the operator level thereby freeing your database administrators to work on other strategic projects.
